KeyStone

The AI Command Laye for the On-Chain Economy

Ma

The $500B Treasury Nightmare

Web3 financial operations are a high-risk, manual process defined by friction and fragmentation. This isn't a minor inconvenience; it's a crisis of complexity that stifles innovation.

70%

Value Leakage

DAO treasuries lose significant value to preventable issues like gas fees and failed transactions

10+

Tool Overload

Disconnected apps teams juggle for basic operations, with 65% citing this as their top challenge

80%

Accessibility Gap

Web3 leaders are non-technical, creating operational bottlenecks and leaving treasury assets idle

While competitors build better dashboards, we eliminate them entirely

KeyStone is an AI-powered operating system that transforms complex, multi-step treasury operations into simple, secure, and executable natural language prompts.

1

Before

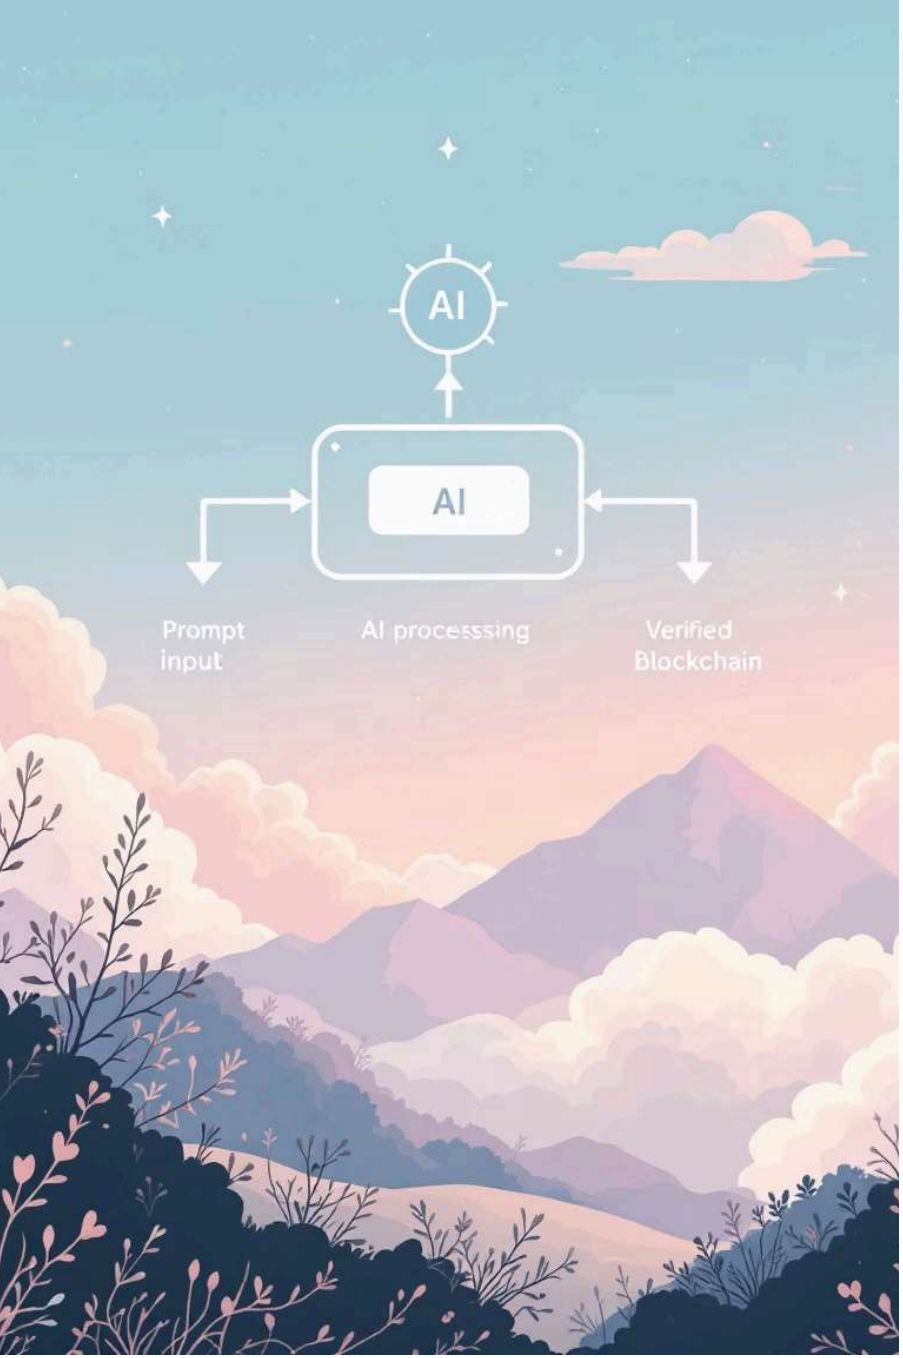
Tangled web of disconnected apps, manual processes, and complex interfaces

2

After

Single natural language command that executes complex treasury operations automatically

We are moving the industry from the era of manual clicks to the era of strategic commands.



The Intent-to-Execution Engine

Our core technology is an agentic AI that understands, plans, and simulates fi
strategy before execution.

01

Command Layer

Zero-code, natural language interface that understands user intent through chat, voice, or API

02

Orchestration Engine

AI agent dynamically selects an
commands across 40+ integrate
protocols to build optimal execu

03

Intelligence Layer

Every operation is pre-validated with live simulation, providing real-time proje
costs, risks, and outcomes

Ma

ChainFlow Oracle: The Core Tech Demo

ChainFlow Oracle is our free, public-facing tool that demonstrates the power of the KeyStone engine.

What it is

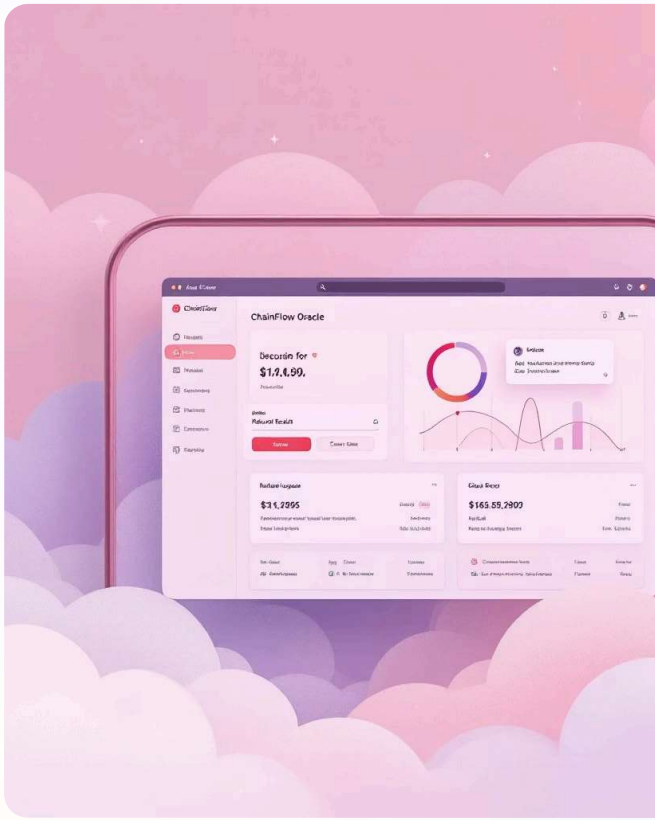
A first-of-its-kind Web3 planning tool that allows anyone to simulate complex, end-to-end, cross-chain treasury flows from a single natural language prompt.

The AI Assistant

For new users, an integrated assistant explains every action and response, making Web3 feel welcoming and secure for the first time.

Strategic Purpose

Serves as our "wow" demo, proving our core technology is real and providing a tangible vision of the future of on-chain interaction.



Ma

Solana Atlas: The User Acquisiti Engine

The Solana Atlas is our live, all-in-one strategic dashboard designed to captur entire Solana ecosystem. It's not a demo; it's a full-fledged product.

Complete Suite

Features nine distinct modules, including a **Rug Pull Detector**, live **MEV Scanner**, and no-code **Auto-DCA Bot**

Command-Enabled

Every tool controllable via nat language command bar, seam integrating with our core visio

Strategic Purpose

Primary user acquisition flywheel designed to attract, educate, and retain p users for enterprise conversion

Ma

KeyStone: The Enterprise-Grade Treasury OS

The Atlas and Oracle are the funnel to our core B2B product: **KeyStone**. This is the enterprise-grade platform for DAOs, protocols, and Web3 businesses.

Automated Vesting & Payroll

Onboard investors and teams in minutes, not weeks. Create and deploy audited vesting contracts or run global crypto payroll with a single command.

Strategic Treasury Management

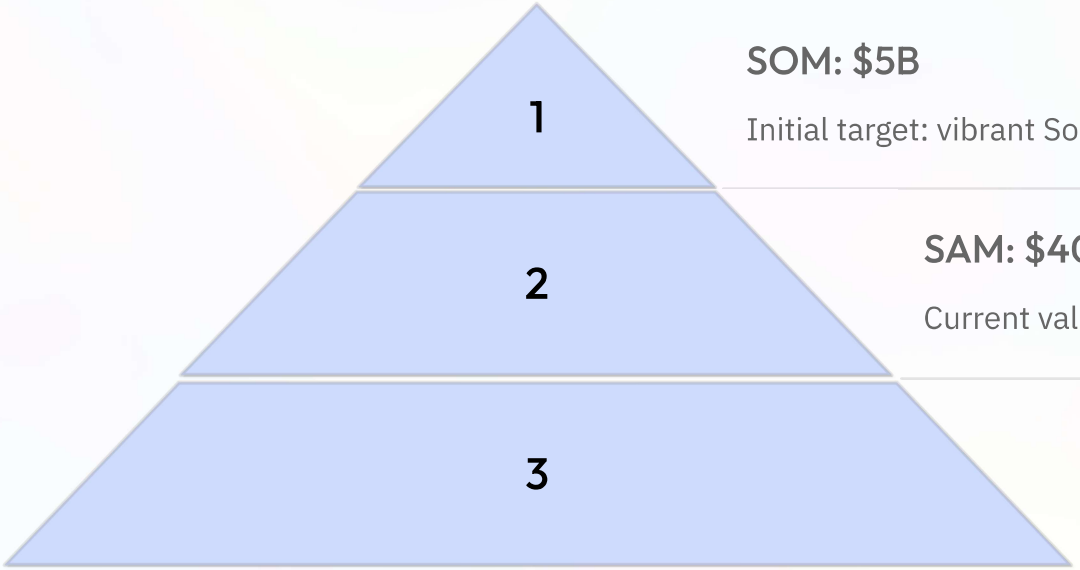
Automate complex strategies like rebalancing, yield farming, and risk management through intelligent orchestration.

Foresight & Simulation

Model the future impact of any financial decision on your treasury's runway and token supply before you commit.

A Multi-Billion Dollar Market Ripe for Disruption

The professionalization of Web3 is creating an urgent need for institutional-grade financial infrastructure.



SOM: $5B

Initial target: vibrant Solana ecosystem, expanding to other L1s and L2s

SAM: $40B+

Current value in DAO treasuries, doubled in the last year alone

TAM: $99B+

Projected Web3 market size by 2034, growing at 41% CAGR

Ma

A New Paradigm

Our competition is focused on building better dashboards. We are creating a new category.

Analytics Dashboards

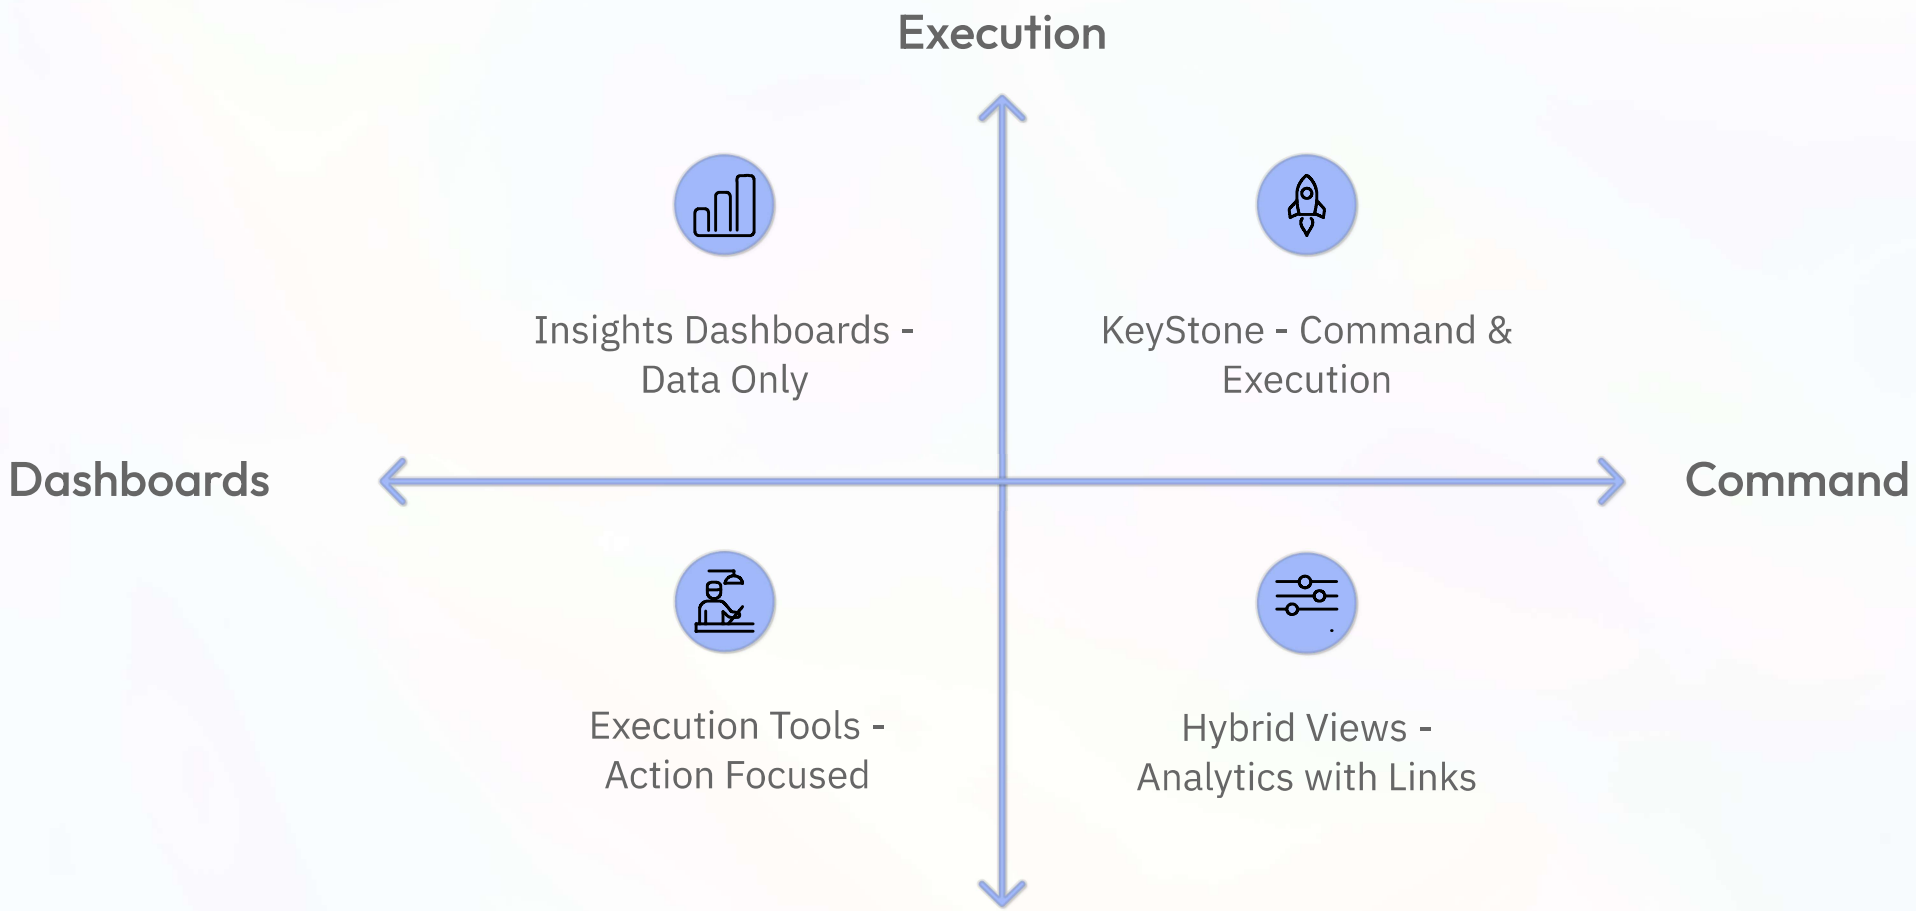
Dune, Nansen: Provide data insights but no direct action capabilities

Execution Dashboards

Magna, Streamflow, Fireblocks: Powerful tools locked into complex, click-based interfaces

Command-Layer Execution

KeyStone: Alone in offering natural language simplicity with direct, secu execution power



Freemium to Enterprise

Our model is designed to build a massive community and convert the highest-value users into enterprise customers.

Free Tier

Solana Atlas & ChainFlow Oracle: Unlimited access to powerful public tools for user acquisition and brand building

Premium Tier - $99/mo

For power users and small teams, offering unlimited executions and deeper integrations on the Atlas platform

Enterprise Tier - $5k-$50k/mo

Full **KeyStone** product for DAOs and businesses, featuring white-label API, dedicated support, and advanced treasury management

Future Roadmap: Path to the Autonomous Treasury

Our strategic roadmap outlines the phased development and scaling of KeyStone, leading to the vision of fully autonomous on-chain treasuries.

Q1 2026: Scale & Secure

Scale Solana Atlas to 50,000+ MAU. Secure first 10 enterprise pilot customers for KeyStone.

Q2 2026: Launch & Expand

Public launch of KeyStone MVP (automated vesting & payroll). Expand to second ecosystem.

Q3 2026: Intelligence Layer

Launch "Project Oracle" beta for advanced strategic forecasting and simulation for enterprises.

Q4 2026 & Beyond

Roll out features enabling DAOs to automate human-readable strategic rules for their treasuries.

In-Depth Competitor Analysis

While many tools address specific needs in the Web3 treasury space, KeyStone stands apart by integrating intelligence, execution, and simpli
unified, AI-powered platform.

Dune Analytics / Nansen	Analytics & Data	On-chain data visualization, market insights, trend analysis	Provides insights without execution cap KeyStone offers both intelligence AND automated execution.
Magna / Streamflow	Execution Tools	Vesting schedules, payroll management, multi-sig transaction execution	Requires manual, click-based interactio KeyStone enables complex operations v natural language commands and AI orchestration.
Fireblocks	Institutional Custody & Execution	Secure asset transfer, multi-party computation (MPC) wallets, defi access for institutions	A strong custody solution with traditiona interfaces. KeyStone offers an intelligen simulation-driven command layer for st financial management.
Gnosis Safe	Multi-sig Wallets	Secure co-management of digital assets, flexible permissioning for DAOs	A foundational security layer. KeyStone on this with an AI agent that plans, simu and executes complex treasury strategi

KeyStone uniquely bridges the gap between sophisticated data analytics and seamless, intelligent execution, offering a comprehensive soluti
unmatched by current market players.
